INDICATIONS

- Adempas (riociguat) tablets is indicated for the treatment of adults with persistent/recurrent chronic thromboembolic pulmonary hypertension (CTEPH), (WHO Group 4) after surgical treatment, or inoperable CTEPH, to improve exercise capacity and WHO functional class.

- Adempas is indicated for the treatment of adults with pulmonary arterial hypertension (PAH), (WHO Group 1), to improve exercise capacity, WHO functional class and to delay clinical worsening.*

  Efficacy was shown in patients on Adempas monotherapy or in combination with endothelin receptor antagonists or prostanoids. Studies establishing effectiveness included predominantly patients with WHO functional class II-III and etiologies of idiopathic or heritable PAH (61%) or PAH associated with connective tissue diseases (25%).

*Time to clinical worsening was a combined endpoint defined as death (all-cause mortality), heart/lung transplantation, atrial septostomy, hospitalization due to persistent worsening of pulmonary hypertension, start of new PAH-specific treatment, persistent decrease in 6MWD and persistent worsening of WHO functional class.

IMPORTANT SAFETY INFORMATION

WARNING: EMBRYO-FETAL TOXICITY

Do not administer Adempas (riociguat) tablets to a pregnant female because it may cause fetal harm.

Females of reproductive potential: Exclude pregnancy before the start of treatment, monthly during treatment, and 1 month after stopping treatment. Prevent pregnancy during treatment and for one month after stopping treatment by using acceptable methods of contraception.

For all female patients, Adempas is available only through a restricted program called the Adempas Risk Evaluation and Mitigation Strategy (REMS) Program.

For important risk and use information, please see additional Important Safety Information throughout, and please access the full Prescribing Information, including Boxed Warning, at http://www.adempas-us.com/PI/.
# Suggested Timing and Assessment for the Follow-up for Patients with PAH

Adapted from 2015 ESC/ERS Guidelines*

6MWT = six-minute walk test  
ALAT = alanine aminotransferase  
ASAT = aspartate aminotransferase  
BGA = blood gas analysis  
ERP = endothelin receptor antagonists  
INR = international normalized ratio  
lab = laboratory assessment  
Echo = echocardiography  
ECG = electrocardiogram  
NT-proBNP = N-terminal pro-brain natriuretic peptide  
PAP = pulmonary arterial hypertension  
RHC = right heart catheterization  
TSH = thyroid stimulating hormone  
WHO FC = World Health Organization functional class

*Adempas does not impact all of these measures.

†Intervals to be adjusted according to patient needs.
‡Basic lab includes blood count, INR (in patients receiving vitamin K antagonists), serum creatinine, sodium, potassium, ASAT/ALAT (in patients receiving ERAs), bilirubin and BNP/NT-proBNP.
§Extended lab includes TSH, troponin, uric acid, iron status (iron, ferritin, soluble transferrin receptor) and other variables according to individual patient needs.
¶Should be considered.
#Some centers perform RHCs at regular intervals during follow-up.

### CONTRAINDICATIONS

Adempas is contraindicated in:

- Pregnancy. Adempas may cause fetal harm when administered to a pregnant woman. Adempas was consistently shown to have teratogenic effects when administered to animals. If this drug is used during pregnancy, or if the patient becomes pregnant while taking this drug, the patient should be apprised of the potential hazard to the fetus.
- Co-administration with nitrates or nitric oxide donors (such as amyl nitrite) in any form.
- Concomitant administration with specific phosphodiesterase (PDE)-5 inhibitors (such as sildenafil, tadalafil, or vardenafil) or nonspecific PDE inhibitors (such as dipyridamole or theophylline). Do not administer within 24 hours of sildenafil. Do not administer 24 hours before or within 48 hours after tadalafil.
- Patients with Pulmonary Hypertension Associated with Idiopathic Interstitial Pneumonias (PH-IIP).

For important risk and use information, please see additional Important Safety Information throughout, and please access the full Prescribing Information, including Boxed Warning, at [http://www.adempas-us.com/PI/](http://www.adempas-us.com/PI/).
## Risk Assessment in PAH

Adapted from 2015 ESC/ERS Guidelines

<table>
<thead>
<tr>
<th>Determinants of prognosis**</th>
<th>Low risk</th>
<th>Intermediate risk</th>
<th>High risk</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clinical signs of right heart failure</td>

<td>Slow</td>
<td>Rapid</td>
</tr>
<tr>
<td>Syncope</td>
<td>No</td>
<td>Occasional syncope††</td>
<td>Repeated syncope‡‡</td>
</tr>
<tr>
<td>WHO functional class</td>
<td>I, II</td>
<td>III</td>
<td>IV</td>
</tr>
<tr>
<td>6MWD</td>
<td>&gt;440 m</td>
<td>165-440 m</td>
<td>&lt;165 m</td>
</tr>
<tr>
<td>Cardiopulmonary exercise testing</td>
<td>Peak VO$_2$ &gt;15 mL/min/kg (&gt;65% pred.) VE/VCO$_2$ slope &lt;36</td>
<td>Peak VO$_2$ 11-15 mL/min/kg (35-65% pred.) VE/VCO$_2$ slope 36-44.9</td>
<td>Peak VO$_2$ &lt;11 mL/min/kg (&lt;35% pred.) VE/VCO$_2$ slope &gt;45</td>
</tr>
<tr>
<td>NT-proBNP plasma levels</td>
<td>BNP &lt;50 ng/L</td>
<td>BNP &lt;50-300 ng/L</td>
<td>BNP &gt;300 ng/L</td>
</tr>
<tr>
<td>Imaging (echocardiography, CMR imaging)</td>
<td>RA area &lt;18 cm$^2$ No pericardial effusion</td>
<td>RA area 18-26 cm$^2$ No or minimal, pericardial effusion</td>
<td>RA area &gt;26 cm$^2$ Pericardial effusion</td>
</tr>
<tr>
<td>Hemodynamics</td>
<td>RAP &lt;8 mm Hg CI ≥2.5 L/min/m$^2$ SvO$_2$ &gt;65%</td>
<td>RAP 8-14 mm Hg CI 2.0-2.4 L/min/m$^2$ SvO$_2$ 60-65%</td>
<td>RAP &gt;14 mm Hg CI &lt;2.0 L/min/m$^2$ SvO$_2$ &lt;60%</td>
</tr>
</tbody>
</table>

6MWD = 6-minute walking distance  
BNP = brain natriuretic peptide  
CI = cardiac index  
CMR = cardiac magnetic resonance  
NT-proBNP = N-terminal pro-brain natriuretic peptide  
pred. = predicted  
m = meters  
RA = right atrium  
RAP = right atrial pressure  
SvO$_2$ = mixed venous oxygen saturation  
VE/VCO$_2$ = ventilatory equivalents for carbon dioxide  
VO$_2$ = oxygen consumption  
WHO = World Health Organization

**Most of the proposed variables and cut-off values are based on expert opinion. They may provide prognostic information and may be used to guide therapeutic decisions, but application to individual patients must be done carefully. One must also note that most of these variables have been validated mostly for IPAH and the cut-off levels used above may not necessarily apply to other forms of PAH. Furthermore, the use of approved therapies and their influence on the variables should be considered in the evaluation of the risk.

††Occasional syncope during brisk or heavy exercise, or occasional orthostatic syncope in an otherwise stable patient.

‡‡Repeated episodes of syncope, even with little or regular physical activity.

§§Adempas does not impact all of these measures.

For efficacy and safety information including monitoring, please see the full prescribing information.

###WARNINGS AND PRECAUTIONS

**Embryo-Fetal Toxicity.** Adempas may cause fetal harm when administered during pregnancy and is contraindicated for use in women who are pregnant. In females of reproductive potential, exclude pregnancy prior to initiation of therapy, advise use of acceptable contraception and obtain monthly pregnancy tests. For females, Adempas is only available through a restricted program under the Adempas REMS Program.

For important risk and use information, please see additional Important Safety Information throughout, and please access the full Prescribing Information, including Boxed Warning, at [http://www.adempas-us.com/PI/](http://www.adempas-us.com/PI/).
WARNINGS AND PRECAUTIONS (continued)

Adempas REMS Program. Females can only receive Adempas through the Adempas REMS Program, a restricted distribution program.

Important requirements of the Adempas REMS Program include the following:

- Prescribers must be certified with the program by enrolling and completing training.
- All females, regardless of reproductive potential, must enroll in the Adempas REMS Program prior to initiating Adempas. Male patients are not enrolled in the Adempas REMS Program.
- Female patients of reproductive potential must comply with the pregnancy testing and contraception requirements.
- Pharmacies must be certified with the program and must only dispense to patients who are authorized to receive Adempas.

Further information, including a list of certified pharmacies, is available at www.AdempasREMS.com or 1-855-4ADEMPAS.

Hypotension. Adempas reduces blood pressure. Consider the potential for symptomatic hypotension or ischemia in patients with hypovolemia, severe left ventricular outflow obstruction, resting hypotension, autonomic dysfunction, or concomitant treatment with antihypertensives or strong CYP and P-gp/BCRP inhibitors. Consider a dose reduction if patient develops signs or symptoms of hypotension.

Bleeding. In the placebo-controlled clinical trials, serious bleeding occurred in 2.4% of patients taking Adempas compared to 0% of placebo patients. Serious hemoptysis occurred in 5 (1%) patients taking Adempas compared to 0 placebo patients, including one event with fatal outcome. Serious hemorrhagic events also included 2 patients with vaginal hemorrhage, 2 with catheter site hemorrhage, and 1 each with subdural hematoma, hematemesis, and intra-abdominal hemorrhage.

Pulmonary Veno-Occlusive Disease. Pulmonary vasodilators may significantly worsen the cardiovascular status of patients with pulmonary veno-occlusive disease (PVOD). Therefore, administration of Adempas to such patients is not recommended. Should signs of pulmonary edema occur, the possibility of associated PVOD should be considered and if confirmed, discontinue treatment with Adempas.

MOST COMMON ADVERSE REACTIONS

The most common adverse reactions occurring more frequently (≥3%) on Adempas than placebo were headache (27% vs 18%), dyspepsia/gastritis (21% vs 8%), dizziness (20% vs 13%), nausea (14% vs 11%), diarrhea (12% vs 8%), hypotension (10% vs 4%), vomiting (10% vs 7%), anemia (7% vs 2%), gastroesophageal reflux disease (5% vs 2%), and constipation (5% vs 1%).

Other events that were seen more frequently in Adempas compared to placebo and potentially related to treatment were: palpitations, nasal congestion, epistaxis, dysphagia, abdominal distension and peripheral edema.

For important risk and use information, please see additional Important Safety Information throughout, and please access the full Prescribing Information, including Boxed Warning, at http://www.adempas-us.com/PI/.
